FS Document

1. Super Admin

FP1	When a user logs in, they will be taken to a role-selection screen **if multiple roles are assigned** to their account. If they have **only one role**, they will be redirected **directly to the main dashboard**. Supported roles include **Super Admin**, **District Admin (for Superintendents)**, District Curriculum Coordinators **(District Admin Level without T-TESS)**, **Campus Admin (for Principals)**, and **Teacher (for Instructors)**. See In ***Figure 1***
FP2	**Roles Association:** There Should be a screen where Super Admin can create the Roles and associate the roles to Different Users. From the start there is a single user for the Owner which will further create other users and their roles. **Reset Password:** On reset password send an email to a particular user to reset the password.
FP3	On the **Landing Dashboard**, the graph provides the following filters: ● **State Dropdown**: After selecting a state, the **District Dropdown** becomes available. ● **District Dropdown**: Defaults to **All Districts** selected. ● **Academic Year Dropdown**: Automatically selects the **current academic year** (e.g., 2025–2026), with the option to switch to previous years such as 2024–2025. Additionally: ● The dashboard graph includes **tabs or dropdown options for selecting quarters**. **All quarters are selected by default.**
FP4	**1. Admin Management Screens** 1.1. The system must provide a **dedicated Admin Management screen** where the Super Admin can **add, delete, or archive**: ● States ● Districts ● Classrooms 1.2. The system must provide a **separate screen** for managing associations between: ● States → Districts ● Districts → Classrooms/Schools **2. State Management**

2.1. The Super Admin can **create a State** with the following fields:

- Name
- Description

2.2. The system must allow editing and archiving of states.

3. District Management

3.1. The Super Admin can **create Districts under a State** with the following required fields:

- Name
- Logo
  Abbreviation
- Short Name
- Phone Number
- State (Selection)
- Time Zone

- Tentative Academic Year Start Month
- Address
- Description

3.2. When a district is opened, it must display **three tabs**:

- **Schools**
- **District Administrators**
- **Assessment Periods**

4. School / Campus Management

4.1. Under a district, the admin can **add Schools/Campuses** with the following fields:

- Name
- Short Name
- ID
- Phone Number
- Address
- Description

4.2. Within each school profile, the admin can assign a **Principal** with the following details:

- First Name
- Last Name
- Status
- Email

5. District Administrators Management

5.1. Under a district, the admin can **add District Administrators** with the following fields:

- First Name
- Last Name
- Email

6. Assessment Period Management

6.1. The system must allow adding predefined assessment periods:

- BOY, Q1, Q2, Q3, EOY

	6.2. For each selected assessment period, the admin must be able to define: ● Start Date ● End Date ● Due Date 6.3. Once added, assessment periods must be **automatically applied to all schools/campuses** within the district. **7. Teacher Management** 7.1. The system must allow the creation of teachers associated with a specific: ● Campus/School ● Class ● Grade 7.2. Required teacher fields: ● First Name ● Title ● Last Name ● Mobile Number ● Gender ● Description ● Email 7.3. A single teacher can be associated with **multiple subjects** and **Classrooms**
FP5	**School / Campus Dashboard – Functional Points** **1. Grade Management** 1.1. The system must allow the admin to **create Grades** within a specific campus/school. 1.2. Each Grade must include the following fields: ● Name ● Short Name ● Description ● Status 1.3. The system must allow updating, activating/deactivating, or archiving grades. **2. Teacher Management (Campus-Level)** 2.1. The system must allow creating Teachers **associated with a specific Campus**. 2.2. Teacher fields must match the specifications defined earlier in **Teacher Management**. ● First Name ● Last Name ● Grade Level ● Subject ● Email 2.3. The system must allow assigning teachers to: ● Specific Classes

	● Specific Grades ● Multiple Subjects (a teacher can teach more than one subject)
	Completion Date _____ Estimated Cost _____
	Approved by Farhan _____ Approved by Juan _____

2. Project Details

FP6	The system must automatically detect the current quarter based on the current date, month, and year, and set it as the default selected quarter on the data dashboard. Additionally, the system must maintain quarter timelines so that the dashboard always displays and filters data using the most current dataset without requiring manual selection.
FP7	The system must allow editing of cutscores directly from the dashboard, with all values being quarter-specific. Users should be able to select a quarter and modify the corresponding cutscores for that period. Also there should be an option to upload the cutscore sheet as per the defined template. As reference see ***Sheet 1***.
FP8	1. Quarter Title Display ● The dashboard must display the current quarter title prominently. 2. Student Metrics (Quarter-Based) ● Total Incoming Students: Number of students entering during the selected quarter. ● Total Outgoing Students: Number of students leaving during the selected quarter. ● Total Overall Students: Total students present during the selected quarter. 3. Drill-Down Functionality ● Metrics must be viewable at multiple levels, from District → School/Campus → Classroom.
FP9	**Campus Dashboard – Functional Points** On the Classroom Screen, the existing bar graph already displays Component Score and Growth for each teacher. A new bar must be added to the graph to show each teacher's Evaluation Score. The Evaluation Score must be calculated using the teacher's T-TESS records, including: ● Walkthrough 1 ● Walkthrough 2 ● Walkthrough 3 ● Observation

	● Summative ● Average ● Growth The system must compute the average of these evaluation components for each teacher. The averaged Evaluation Score must be displayed as a separate bar for each teacher on the graph. This functionality must work for all quarters (Q1, Q2, Q3, Q4, etc.), meaning: ● When a quarter is selected, the evaluation bars must reflect the scores for that quarter only.
FP10	**Attendance Dashboard — Functional Requirements** 1. **Dashboard Visibility** 1.1. The Attendance Dashboard must be accessible to all user types (Super Admin, District Admin, Campus Admin, Teachers). 1.2. Data must be visible campus-wise based on user permissions. (check box Y/N) 2. **Existing Dashboard Features (Current Behavior)** 2.1 ADA (Average Daily Attendance) Metrics ● Displays ADA Percentage per campus. ● Shows Estimated Annual $ Missed based on attendance. ● Shows Estimated $ Per Student, currently hardcoded as $55. Allow districts to change this amount if needed ● District Goal (attendance target) is displayed as 95%, currently hardcoded. Allow districts to change this amount if needed 2.2 Yearly ADA Bar Chart ● A Monthly ADA bar chart for the entire year. ● Includes: ○ Attendance percentage per month. ○ Corresponding $ Missed Amount per month. 2.3 Campus-wise Financial Summary ● Shows Campus-wise $ Missed Amount. ● Displays corresponding student counts. 2.4 “Lowest ADA – This Month” Section ● Shows students with lowest attendance for the 3 days only for the current available month. ● Currently displays the consolidated district-wise data.

2.5 Category-based ADA Graphs

- Displays month-wise ADA graphs categorized by:
  - Elementary
  - Middle School
  - High School

3. **Updated Requirements (New Changes)**

3.1 Campus Dropdown in “Lowest ADA – This Month”

- A new Campus Selection Dropdown must be added in the “Lowest ADA – This Month” section.
- Default option = "ALL"
  - When “ALL” is selected → Display overall district stats.
  - When a specific campus is selected → Display campus-specific stats for the last 3 days.

3.2 Behavior After Selection

- Data must refresh dynamically based on the selected campus.
- All displayed student counts and attendance values should adjust accordingly.

4. Attendance Data Source

- The dashboard continues to use the uploaded attendance sheet (as currently implemented).
- The system must read and process the sheet for:
  - Monthly ADA values
  - Per-campus data
  - Student-level daily attendance for the lowest 3 days of available Month.
  - Category-based ADA (Elementary, Middle, High)

5. Data Validation & Skipping Logic

When the admin uploads the weekly attendance sheet:

- **The system must validate the dates** contained in the uploaded sheet.

- If the sheet contains **records with dates earlier than or equal to the latest date already stored in the attendance table**,
  → **those entries must be skipped** (ignored).

- The system must **only import records that come after the last stored date** in the database.

- After processing, the system should provide:
  - A **summary** of how many rows were skipped (older entries)
  - A **summary** of how many rows were successfully inserted (new entries)

- No duplicate or overlapping date entries should be inserted into the system.

FP11	**New Attendance Submenu — Student Attendance Summary** 1. **New Submenu Creation (Student Lvl Attendance)** 1.1. Under the Attendance module, a new sub-menu must be added. 1.2. This submenu will display a comprehensive student list, similar to the existing Student Listing Dashboard. 2. **Student Listing — Display Fields** The student list must show basic student information, including: ● Student Name ● Current Campus ● Grade ● Subject / Course Additionally, the following three new attendance-related columns must be added: 2.1 Total Absents ● Displays the total number of days the student was absent in the selected timeframe (month/quarter/year as applicable). 2.2 Total Membership Days ● Shows the total membership days (school days the student was enrolled/expected to attend). 2.3 Total Average ● Displays the student's **attendance average percentage**, calculated as: ● Attendance Avg=Membership DaysMembership Days−Total Absents×100 3. **Additional Functional Notes** ● The table must be sortable and filterable by Campus, Grade, and Subject/Course. ● Admin can export the full list or as per selective filter as Excel/CSV. (dynamic) ● Permissions must follow role-based access (District Admin sees district; Campus Admin sees campus, etc.). ● Data must sync with the attendance sheet upload logic (using the cleaned, validated records).
FP12	**Enhanced Search Filter — Multi-Select & "ALL" Option** 1. **Multi-Select Dropdown Support** ● All search filter dropdowns must now support multi-selection. ● Users should be able to select multiple values within the same dropdown to filter records more flexibly. 2. **"ALL" Option** ● Each dropdown must include a new value labeled "ALL". ● When the user selects ALL, the system should treat it as: ● Include all values for that filter, Without requiring the user to reset the filter ● When ALL is selected, users must still be able to deselect individual values if they want to exclude specific items. 3. **User Experience Improvements**

	• No need to reset filters to display all results — selecting ALL replaces that workflow. • Users can combine ALL + specific exclusions or multiple selections to refine results easily. • The UI must update results dynamically based on the selected items.
	Completion Date _____ Estimated Cost _____
	Approved by Farhan _____ Approved by Juan _____

3. Sheets Details

P1	**Quarter Sheet – Teacher & Association Functional Point**
	
	• The **Quarter Sheet** must include the **Teacher ID** alongside the **Teacher Name** and **Student ID** and **Student Name**.
	
	• The system must use these IDs to **accurately track and maintain records** of each teacher and their associations, including:
	
	  ○ Teachers -> **Grades, Classrooms and Subjects.**
	  ○ Students -> **Grades, Classrooms and Assigned Teachers.**
	
	• This ensures reliable historical tracking, data consistency, and proper mapping of teachers across all quarters.
	
	• Teacher assignments must be flexible enough to support scenarios such as:
	  ○ One teacher teaches **different subjects** in the same classroom.
	  ○ One teacher teaches the **same subject** across multiple classrooms.
	  ○ One teacher handling **multiple grades**, if required.

P2	**Teacher Score Sheet Integration — Functional Point**
	
	• The system must support a **Teacher Score Sheet** that includes the following fields:
	
	  ○ **Teacher ID**
	  ○ **Teacher Name**
	  ○ **Campus**
	  ○ **Grade**
	  ○ **Subject**
	
	  ○ **Score Points** such as:
	  ■ Walkthrough 1
	  ■ Walkthrough 2
	  ■ Observation
	  ■ Summative
	
	• When processing this sheet, the system must **match each Teacher ID** against the existing teacher records from the **Quarter Sheet**.

	• **Only teachers that exist in the Quarter Sheet** must have their scores processed, saved, or updated—regardless of whether the **Grade, Classroom, or Subject** in the Teacher Sheet matches or differs from what is shown in the Quarter Sheet. • The **Quarter Sheet is the master reference source** ("the base") for validating all teacher associations and determining which teachers are eligible for score entry.
